Preface

Welcome to the Buckstake family.

Buckstake is digital asset. Buckstake is cryptoasset. Crypto asset is a virtual / digital business derivative of an asset in the real sector. We know very well, now the problem that exists in the world financial side is the domination of economic factors by capitalists and superpowers. Because they have regulations and restrictions on the rules of the game for their benefit. It is time for us to reform, for the sake of a more transparent and reliable world economy. The Blockchain changed the game of strict regulation from the government and capitalists from being centralized to decentralized.

From its origin, Buckstake is designed not only as a financial instrument or just an investment product. We have a bigger vision, and that is building a better and bigger economic ecosystem. Without a solid ecosystem, an investment will not be long-term.

We believe, with this Buckstake, a new economic ecosystem has begun. We will accommodate thousands of Small and Medium Enterprises (SMEs) to join our community, to grow and contribute to a better future for humanity.

1. Abstract

Buckstake is a crypto asset created by combining blockchain projects and Masternodes.

The main objective of this ICO is fighting economic injustice, creating an asset that can make it easier for people to invest in a sophisticated, transparent, and trusted blockchain system. In its development, Buckstake will use the funds obtained from the Initial Coin Offering (ICO) to create a platform where small and medium businesses can obtain additional capital to advance their business in the form of daily profits, consultations, and intensive guidance.

Buckstake was created using Masternodes technology. Masternodes is an existing blockchain platform, specifically known as a platform for developing financial applications and services

2. Our vision

Vision: Buckstake; justice for welfare.

An asset that can improve the welfare of all groups.

Buckstake was born to provide welfare for the community. We are here to help all groups towards a more positive standard of living. We have ambitions to alleviate poverty, fight economic injustice, and provide investment instruments that are fair to all parties. All these visions, missions, and ambitions will be manifested by methods that prioritize love, caring for others, and creativity and advanced technology.

For investors, Buckstake provides investment assets with a futuristic concept. From the technology used and the business model, it will increase profits for investors. The technology used by Buckstake has a faster, bigger, and more trustworthy transaction process. Included will also be more cost effective and environmentally friendly.

From an investment perspective, we have a mission to create an investment platform with a low risk of loss. Especially in cryptocurrency investment, the risk of losing capital is very high. There has been a lot of cryptocurrency that has experienced price declines after the ICO, which resulted in a large capital loss. Buckstake minimized the investment losses by developing a system of "staking 0.5-1% Daily". With this system, the value of Buckstake Coin will never be lower than the value of your purchase.

To keep Coin's demand high, Buckstake integrates itself with small and medium businesses, real businesses. For them, Buckstake provides an ecosystem that allows blockchainization of these companies. They will have their own ICO, and Buckstake will act as the only means of exchange for buying the company's coins.

By combining a system of low-risk investments and high demand projections, Buckstake provides an investment platform that prioritizes investors.

3. Our Industrial Market

There are 2 main sectors in Buckstake marketing

a) Business and Financial Sector

In this sector, Buckstake serves as a digital currency-based investment tool that is future value, where the value can go up and down according to demand and supply, just like in stock trading or futures exchange issuers.

b) Industry of crypto currencies and digital assets

Based on its form, method of creation and circulation, Buckstake is included as a crypto currency and digital asset. Based on blockchain technology, Buckstake offers a type of investment asset that is transparent, safe and based on advanced technology.

3.1 Marketing Plan

The Buckstake marketing system uses P2P by stamping 0.5-1% per day with 1% lending from staking which is paid monthly and 30% lock wallet month 4.50% Month 5 and 100% open lock wallet on month 6. Investor capital is in the form of a coin and will be returned in stages. For investors who have received Coin returns from staking and returning coin capital they cannot be reinvested by top up but by buying a new coin in the market.

With millions of potential buyers, this will be a major factor driving the price of Buckstake. Not only that, Buckstake will also be offered using various marketing media such as advertisements, mass media, endorsements, events, etc., to reach more potential investors.

4. Buckstake Market Cap and Future Trend

During the ICO (initial coin offering) period, initial coins issued were 2,000,000. And this number will increase with increasing with masternodes, until it reaches the max cap number of 10,000,000 coins. Coin increase will always be followed by an increase in users, whose numbers are unlimited.

4.1 Buckstake Price Projection? Why will the value continue to rise

There are 2 factors that influence Buckstake's price increase:

- (a) Buckstake's price trend which tends to increase in the future
- (b) Projected high demand for Buckstake Coin because of its use as a transaction tool.

5. Why is the Blockchain? What is the Urgency of Decentralization in Buckstake?

The blockchain technology has recently been increasingly used by large corporations in the world. Whether it's a government-owned or private company. This can not be separated from the function of technology that can simplify and streamline various processes.

Then, why does Buckstake use Blockchain technology?

1) Cutting Process and Bank Administration Costs

Blockchain allows a transaction, no longer requires a third party or intermediary such as a Bank.

For example when transferring money, Budi sent money to Andi for \$ 1000 million through internet banking. At first glance, the transfer made by Budi to Andi was without intermediaries.

But actually, the transfer made by Budi was already recorded by the bank before the money finally arrived at Andi. Well, with the Blockchain, Budi's \$ 1,000 million money will immediately move to Andi, without being recorded by the bank.

This is the reason why Buckstake uses Blockchain technology. That is cutting the process and bank administration fees.

2) Trimming the Bank's Borrowing and Borrowing System in Giving Capital to Business Actors

Both the high loan costs and the availability of financing from the bank are under this title. Differences between countries in access to finance partly reflect the influence of monetary policy and capital market development.

The lack of financing is a barrier for some companies that invest in the new equipment, technology, and marketing methods needed to participate in the production network.

This is where Buckstake plays a role. Buckstake will empower business people. The company will help to utilize, educate, and encourage SMEs to continue to improve, especially in terms of increasing company revenue

3) Creating a More Transparent and Technology-Oriented System in the World of Investment

Because using "blockchain" technology, Buckstake will be a decentralized investment asset. Unlike a currency regulated by a bank, Buckstake will be a transparent investment product, can be overseen by all investors, and far from the element of price manipulation. And with this sophisticated blockchain technology background, Buckstake can be owned by prospective investors with an easy process, short administration, and very affordable costs.

6. Challenges in Publishing Buckstake As Crypto Assets and Solutions

1. Limited Knowledge of Communities Regarding Investments in the Crypto World

The community in particular is still very lay against digital investment. Not only crypto assets and crypto currency, share ownership is still an exclusive thing among the people of Indonesia.

Solution: Education and dissemination of basic concepts around crypto asset investment, cryptocurrency in the community.

Distribution is carried out through online media, social media, videos, modules, and various field activities; about the advantages and risks of investing in this field. This is to convince the public and investors that Buckstake is cryptoasset which has the potential for good profits as an investment medium.

2. Number of Similar Business Types that Turn Out Scams or Fraud

There are various Initial Coin Offering and digital investments that lead to scam or fraud. Customer funds are carried away and just evaporate. This phenomenon is quite widespread, so the suspicion of investors to invest in similar products.

Solution: Buckstake seeks to build credibility and a positive impression in the eyes of investors. Team identity, competence, founder, vision and mission, office address; all are clearly stated on the website. In addition, Buckstake makes sure to submit to institutions that regulate Buckstake circulation, to ensure investor funds are protected safely.

3. Uncertain Regulations from the Government Regarding Crypto Assets

At the beginning of the establishment and pre-sale of Buckstake, there was no regulation from the government (where the Buckstake office was) that regulated crypto assets.

7. Buckstake Ecosystem

In his business practices, Buckstake partnered and played a role in business aspects, precious metal research and development, and technology. Which will be a single marketplace that provides Buckstake trading activities.

8. Benefits of Investing in Buckstake

Secure

Made with decentralized blockchain technology, Buckstake is a very safe investment medium. Stored in the latest secure crypto wallet, this

investment tool can only be accessed through a very sophisticated authorization system. Only investors can do the Buckstake transaction.

Profitable

The benefits gained from investing in the Buckstake field are projected high and significant. This is because of dynamic price movements, driven by high demand and Buckstake transactions on the market.

Easy and Fast Purchasing Process

The process of purchasing Buckstake can be done very easily, as easy as registering an account on social media and clicking from the smartphone that you hold. Without the need for complicated verification, in a matter of minutes Buckstake will be received in your crypto wallet.

Low Initial Capital

Buckstake can be purchased at very low prices, starting at \$ 0.141053 per 1 Buckstake (at ICO).

Low Administrative Costs

Because it is not centralized like a conventional bank, the administrative costs and the Buckstake sale transaction are much lower. Only 1% for market takers and 0% for market makers

High Demand

Buckstake will begin to be offered to millions of potential investors affiliated with products that have been marketed by Inspira; both as resellers, agents, distributors, and end-users.

24 hour service

Buckstake is supported by a dedicated Customer Service team that is ready to serve you every day for 24 hours. The Customer Service team will be under the direct supervision and guidance of the Inspira team who are used to serving millions of customers every day. Fast response, and the average incoming ticket complaints can be completed in less than 1 x 24 hours.

Transparent, Prices Can Be Monitored 24 Hours

The Buckstake price movement is transparent because it can be monitored fully for 24 hours through the trading platform provided by Santara, supported by a stable and strong server. There will be no sudden price spike that appears at the beginning of the week because the movement at the end of the week is not monitored. Buckstake prices will continue to be monitored both on weekdays and weekends.

Active Education

Investing in Buckstake not only provides high profitability assets, but also education around the world of investment, especially cryptocurrency. By buying Buckstake, investors will also get educative products around trading strategies, entry and exit points (the right time to sell or buy),

price predictions based on technical and fundamental analysis, risk management, trading psychology, and much more.

9. Technical Information on Buckstake Technology

The purpose of creating the Buckstake blockchain is to make it easier for developers of the blockchain system to not need to focus too much on the development of the blockchain component

The security system implemented in the Buckstake ecosystem consists of the following 4 layers: 1. Cloudflare 2. Web Wallet 3. Secure Sockets Layer (SSL) 4. Google Authenticator

9.1 Advantages of Buckstake Technology

1. Using the Proof-of-Stake Consensus Algorithm

The Proof of Stake currency can be several thousand times more costeffective than the commonly used proof of work. From an investor's perspective, that means fewer transaction costs and more potential profits.

2. Save Energy

The large energy consumption of major cryptocurrency has become a major concern for long-term impacts. Buckstake uses an energy-saving platform that can significantly reduce energy consumption. By investing in Buckstake, you also take part in conserving energy. Significantly more environmentally friendly.

3. Faster Transaction Process

A faster transaction process provides great benefits for investors. More and more large cryptocurrency experiences slow transaction costs and a sharp increase in mining costs. By using Proof-of-Stake, Buckstake will be able to maintain the transaction process faster and avoid the negative consequences of currency based on currencybased Proof of Work.

4. Without Bloat Blockchain

Blockchain bloat is a condition that occurs when a block is filled to capacity with many micro transactions. This might give very little value to the network as a whole but flood the network with many smallvalue transactions.

If left unchecked, the size of the blockchain can explode. Then, people need to spend more money to increase storage capacity and bandwidth. Buckstake technology minimizes cases of bloat blockchain. This will keep bandwidth storage and expenditure as low as possible.

5. Very High Transaction Capacity

The best thing about using the Proof-of-Stakes consensus algorithm is its ability to process transactions to another level. Not only is it faster, but it also has a higher transaction capacity. This condition allows investors to conduct transactions smoothly without technical problems. Faster, smoother and more reliable transactions.

6. Very safe infrastructure

Buckstake has many layers of security. Cloudflare acts as a fortress to maintain the Buckstake-node console from DDOS attacks. The white list firewall ensures that only authorized people, sites, or networks can access information.

Secure Sockets Premium (SSL) and Hyper Text Transfer Protocol Secure (HTTPS) layers protect every data sent and received from / to the server from information leakage.

With these four layers of security, Buckstake can indeed distinguish itself among the safest crypto assets in the world.

10. Buckstake Model Revenue

10.1 Through an Initial Coin Offering (ICO)

Buckstake conducts crowdfunding through ICO. Funds collected from the ICO will be used to run future projects, conduct marketing, operational financing, and much more.

10. Through the Implementation of the Buckstake Future Project

As explained above, Buckstake will run a future project to fund owners of Small and Medium Enterprises. One of them is in the form of loans without capital. These SME owners will be selected strictly by the Buckstake team. Once selected, they will be given the opportunity to do ICO through Buckstake blockchain. Which can only be bought with Buckstake, so Buckstake's demand will increase. Demand is rising, Buckstake prices will rise. Buckstake as a main-chain will be profitable in increasing transaction volume, because it pays transaction fees for its main-child.

11. Buckstake Long Term Vision: Small and Medium Enterprise Economic Development Platform

In accordance with the roadmap, Buckstake has a long-term vision as a platform for developing Small and Medium Enterprises (SMEs). Buckstake has a vision to support business owners in expanding their business. Being a tool that can be used to find additional capital and investors for SME entrepreneurs.

The system developed by Buckstake is different from the system carried out by banks or centralized financial institutions. Buckstake will give more support to SME owners with interestfree capital loans, fast administrative processes, and business education.

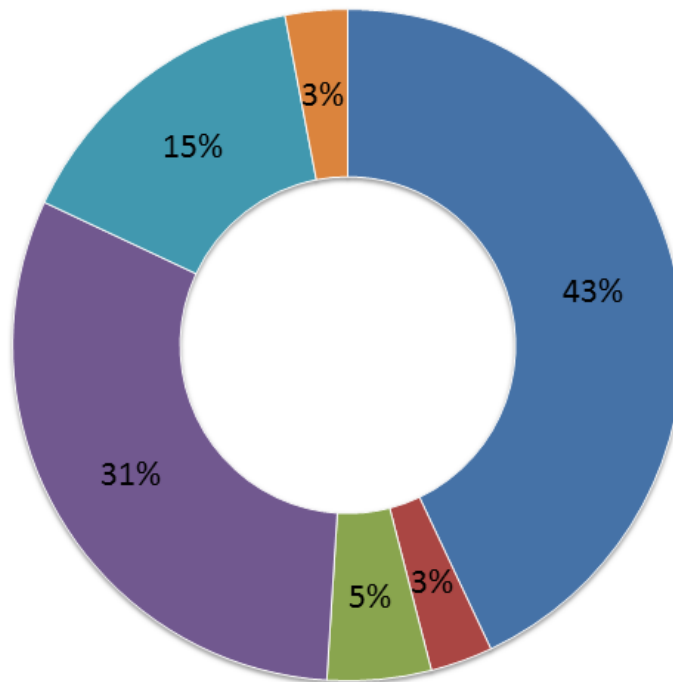

In a long-term vision, Buckstake will take the role of driving the economy of the wider community. Buckstake will be an investment medium whose benefits can not only be enjoyed by large capital investors, but also the general public.

12. Allocation of Funds from Initial Coin Offering (ICO)

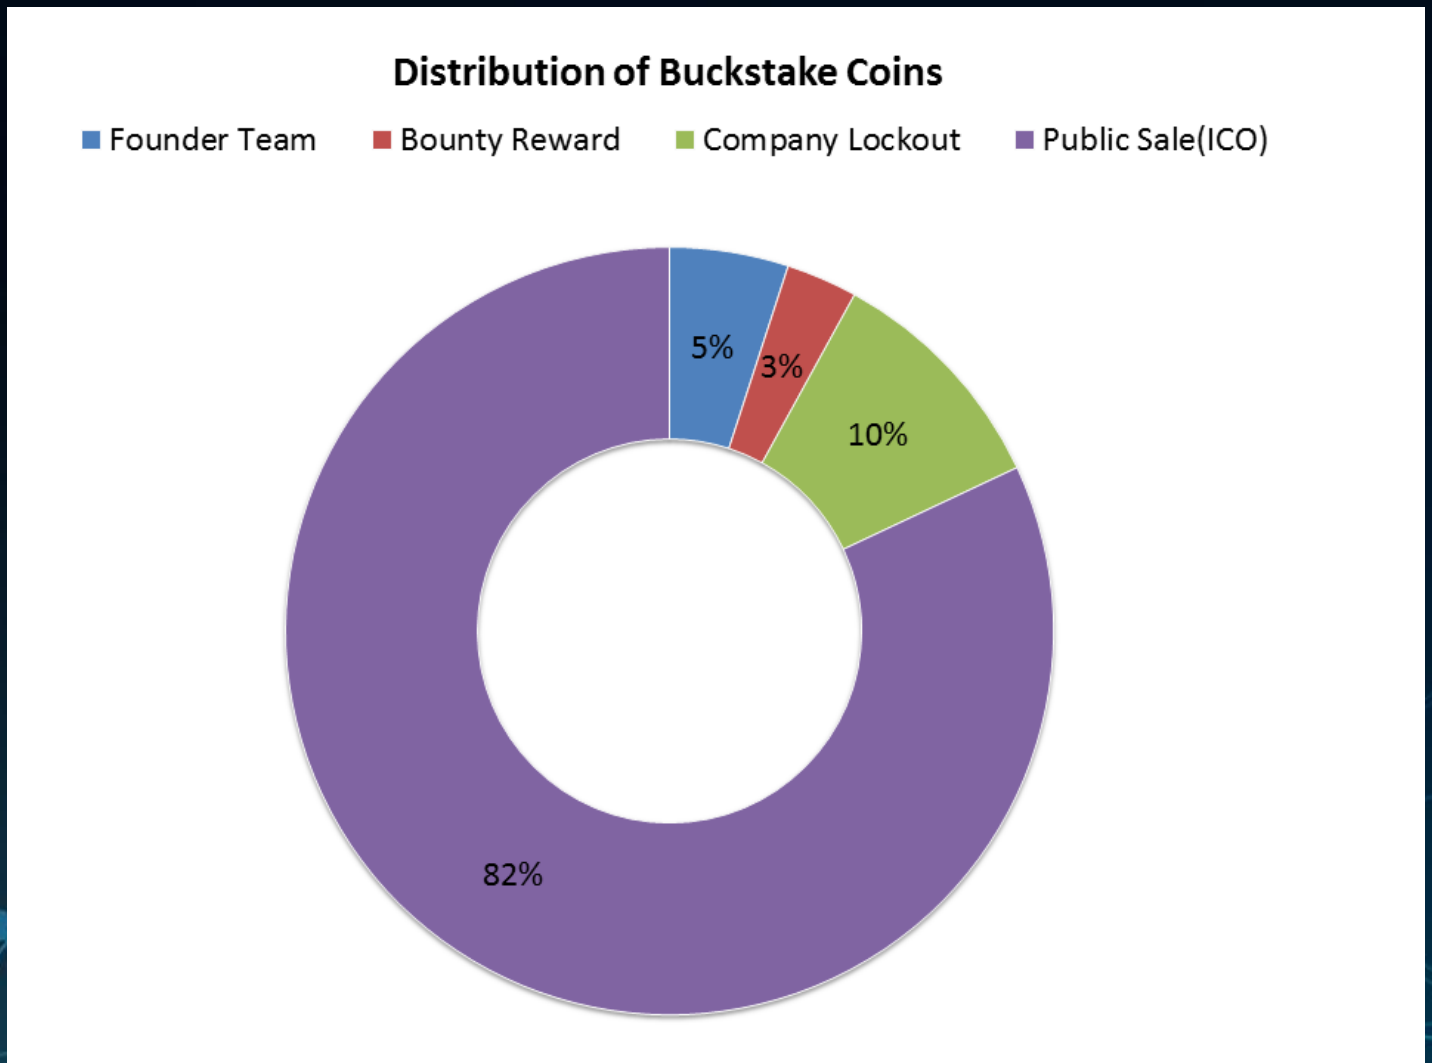

Allocation of Funds from Initial Coin Offering (ICO)

■ Buy Back Coin ■ Legal and Admin ■ Oprational Cost
■ Future Development ■ Marketing ■ Banking & Crypto

- . 43% is used to buy Buckstake Coin
- . 31% for future project development, developing the Buckstake child chain based on the real business sector
- . 15% for marketing Buckstake products at home and abroad
- . 5% to finance Buckstake operations, fixed costs and variable costs
- . 3% for legal admin, related to licensing and administration
- . 3% for crypto and banking

13. Distribution of Buckstake Coins

- Founder's coins are the number of Buckstake Coins that are distributed to the Buckstake team
- Company lockout is the amount of Coin held by the company and may be issued in the future
- Bounty and rewards are coins given to Buckstake marketing, in the form of affiliate commissions, contests, and paid to promote articles

14. How to buy Buckstake

The Buckstake Coin purchase process can be done in the following ways:

1. Register
2. login
3. Complete Data

15. Disclaimer (Risks in Investing Buckstake)

We advise you, especially prospective investors who are still unfamiliar in the world of Crypto, not to invest in ICOs before understanding concepts, ways of working, risk, profit projections, and the basics of crypto assets. This is stated in the terms and conditions on the Buckstake website, before registration. Investing without understanding the things above can result in losing some of your capital (capital). If something is not understood about investment or crypto assets in general, please contact our customer service.

Let us together maintain the ICO investment climate so that it is always conducive. We guard together so that all possible scams can be minimized, and investor welfare can be achieved.
